

## PRACTICAL

**AIM:**

Find runner-up from given list

**Sample Input**

5  
2 3 6 6 5

**Sample Output**

5

**CODE:**

```
n = int(input())
arr = map(int, input().split())
arr = list(arr)
p = max(arr)
q = -9999999
for i in range(0,n):
    if arr[i]<p and arr[i] > q:
        q = arr[i]
print(q)
```

**OUTPUT:**

```
4
2 6 6 3
3
```

```
5
4 7 3 6 5
6
```
